

What is Turnitin and What Can it Do?

Turnitin is a third-party software which is enabled within the Canvas Learning Management System and Microsoft Word that offers assessment tools for both faculty and students, provides plagiarism checking based on matches and/or comparable text to information available in repositories, and has AI writing detection capabilities.

Assessment Tool for Faculty

Faculty have multiple resources to access within Turnitin's services. For assignments within Canvas, there is the [Plagiarism Review](#) feature. The student assignment submissions are compared to entries within existing repositories and produce a [Similarity Report](#) that can be found in the Canvas SpeedGrader section.

Turnitin's features also offer [AI Writing Detection](#) which provides insights to the potential use of AI writing tools such as ChatGPT in student submissions.

File requirements for submission to be processed for Turnitin AI writing detection:

- File size must be less than 100 MB
- File must have at least 500 words of prose text and not exceed 15,000 words
- File must be written in English long form writing format
- Accepted file types: .docx, .pdf, .txt, .rtf

Assessment Tool for Students

[Draft Coach](#) is a newly enabled service that students have access to within Microsoft Word via online Microsoft 365 account. (The service is not available in the desktop Word application.) Students can have Turnitin review a document up to three times to help check for similarity of other works, review for proper citations, and offer grammar checks. This allows students the opportunity to have the work checked and make necessary changes before a final submission is made by the student to the instructor.
